

**Statement to Federal Communications Commission**

**Regarding the Standards For Evaluating Between Non-commercial Educational Applicants**  
**(MM Docket No.95-31)**

EX PARTE OR LATE FILED

We, the undersigned residents of Ponca, Nebraska and the surrounding area, offer these comments to the FCC regarding the method to be used to choose between conflicting applications for new noncommercial educational stations:

1. A point system, such as the FCC outlined in its **Further Notice of Proposed Rule Making**, would be preferable to a lottery system or hearings.
2. In formulating a point system, we urge the FCC to place particular **emphasis** on (a) localism and (b) a diversity of media voices in the listening area. We believe that in choosing between noncommercial educational applicants, the Commission should give a significant number of points to an applicant that is locally controlled, that is, governed by persons who reside within the area the station will serve. The Commission also should give a significant number of points to an applicant without an other broadcast station in the area.
3. Furthermore, the FCC should award points to an applicant for proposing to be licensed to a community without other noncommercial stations. Additional points should be awarded if the applicant is proposing to be the first broadcast station of any kind licensed to the community in question.

**Statement to Federal Communications Commission**  
**Regarding the Standards For Evaluating Between Non-commercial Educational Applicants**  
**(MM Docket No.95-31)**

We, the undersigned residents of Ponca, Nebraska and the surrounding area, offer these comments to the FCC regarding the method to be used to choose between conflicting applications for new noncommercial educational stations:

1. A point system, such as the FCC outlined in its **Further Notice of Proposed Rule Making**, would be preferable to a lottery system or hearings.
2. In formulating a point system, we urge the FCC to place particular emphasis on (a) localism and (b) a diversity of media voices in the listening area. We believe that in choosing between noncommercial educational applicants, the Commission should give a significant number of points to an applicant that is locally controlled, that is, governed by persons who reside within the area the station will serve. The Commission also should give a significant number of points to an applicant without an other broadcast station in the area.
3. Furthermore, the FCC should award points to an applicant for proposing to be licensed to a community without other noncommercial stations. Additional points should be awarded if the applicant is proposing to be the first broadcast station of any kind licensed to the community in question.

Statement to Federal Communications Commission  
Regarding the Standards For Evaluating Between Non-commercial Educational Applicants  
(MM Docket No.95-31)

(10) We, the undersigned residents of Ponca, Nebraska and the surrounding area, offer these comments to the FCC regarding the method to be used to choose between conflicting applications for new noncommercial educational stations:

1. A point system, such as the FCC outlined in its Further Notice of Proposed Rule Making, would be preferable to a lottery system or hearings.
2. In formulating a point system, we urge the FCC to place particular emphasis on (a) localism and (b) a diversity of media voices in the listening area. We believe that in choosing between noncommercial educational applicants, the Commission should give a significant number of points to an applicant that is locally controlled, that is, governed by persons who reside within the area the station will serve. The Commission also should give a significant number of points to an applicant without an other broadcast station in the area.
3. Furthermore, the FCC should award points to an applicant for proposing to be licensed to a community without other noncommercial stations. Additional points should be awarded if the applicant is proposing to be the first broadcast station of any kind licensed to the community in question.

**Statement to Federal Communications Commission**  
**Regarding the Standards For Evaluating Between Non-commercial Educational Applicants**  
**(MM Docket No.95-31)**

We, the undersigned residents of Ponca, Nebraska and the surrounding area, offer these comments to the FCC regarding the method to be used to choose between conflicting applications for new noncommercial educational stations:

1. A point system, such as the FCC outlined in its **Further Notice of Proposed Rule Making**, would be preferable to a lottery system or hearings.
2. In formulating a point system, we urge the FCC to place particular emphasis on (a) localism and (b) a diversity of media voices in the listening area. We believe that in choosing between noncommercial educational applicants, the Commission should give a significant number of points to an applicant that is locally controlled, that is, governed by persons who reside within the area the station will serve. The Commission also should give a significant number of points to an applicant without an other broadcast station in the area.
3. Furthermore, the FCC should award points to an applicant for proposing to be licensed to a community without other noncommercial stations. Additional points should be awarded if the applicant is proposing to be the first broadcast station of any kind licensed to the community in question.
